

FLEXIBLE LED MAPLIGHT

The new flexible led maplight from McGeoch is a ruggedised task lighting unit designed for military applications based on high brightness LED technology.

Although the 'gooseneck' mount is flexible enough to allow the user to position light exactly where required at the workstation, it is also substantial enough to withstand movement under vibration.

Key features include:

- Very high intensity white LED for main map light feature with wide angle output
- White LED is chosen to have high Colour Rendering Index (CRI) to clearly show red lines (roads)
- Switch/dimmer function
- Sealed IP65 enclosure
- 24/28V DC operation
- Optional additional red or blue tactical lighting within a common head unit

- Standard unit has surface mounting enclosure
- Optional flush mount base plate available where electronics may be hidden beneath the workstation desk
- EMC – compatible with military fighting vehicles and forward command centres

Applications include:

- Military land vehicles
- Warships and submarines
- Helicopter and transport aircraft
- Field units including fixed and portable command centres, hard wall / soft wall shelters and containers
